

## BAT1 POWER

2S BAT:6~8.4V

## BAT Voltage Detection

$$\text{BAT\_ADC} = \text{BAT} \times 0.3629$$

Note: When the battery voltage is detected  $\leq +6.4\text{V}$ , the software needs to shut down the device to protect the battery.

## USB Voltage Detection

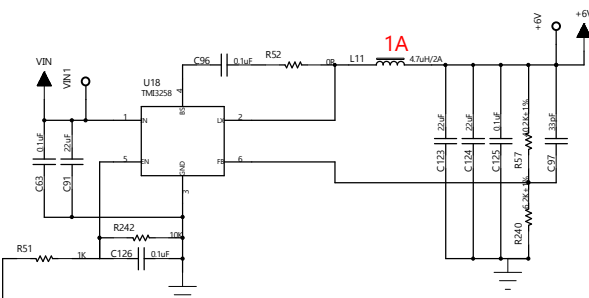

$$\text{VBUS\_ADC} = \text{VBUS} \times 0.3629$$

## DC BUCK +3V3

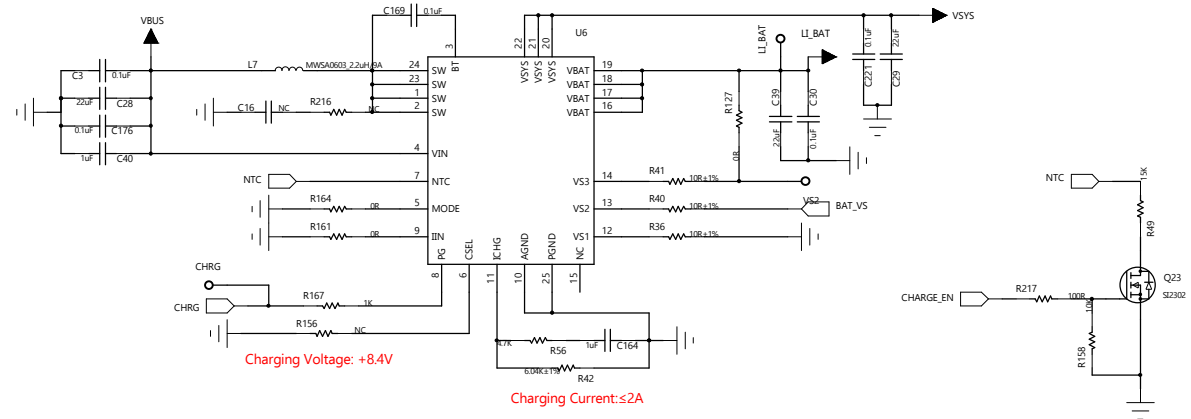

$$V_{\text{out}} = (R1/R2+1) \times 0.8$$

## DC BUCK +5V

## 2 Cell BAT Charging

Vsys Current: <2A

Charging Voltage: +8.4V

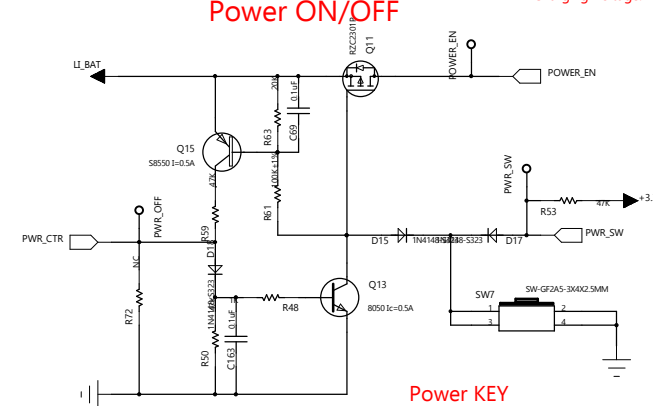

Charging Current:  $\leq 2\text{A}$

## Automatic Power Switch

## Power ON/OFF

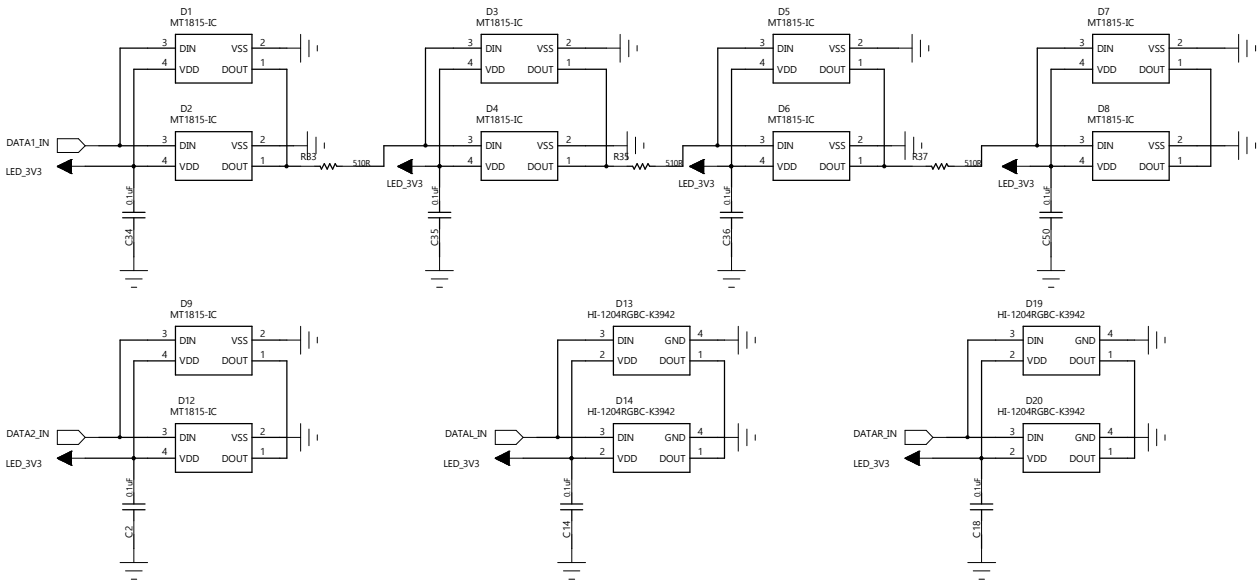

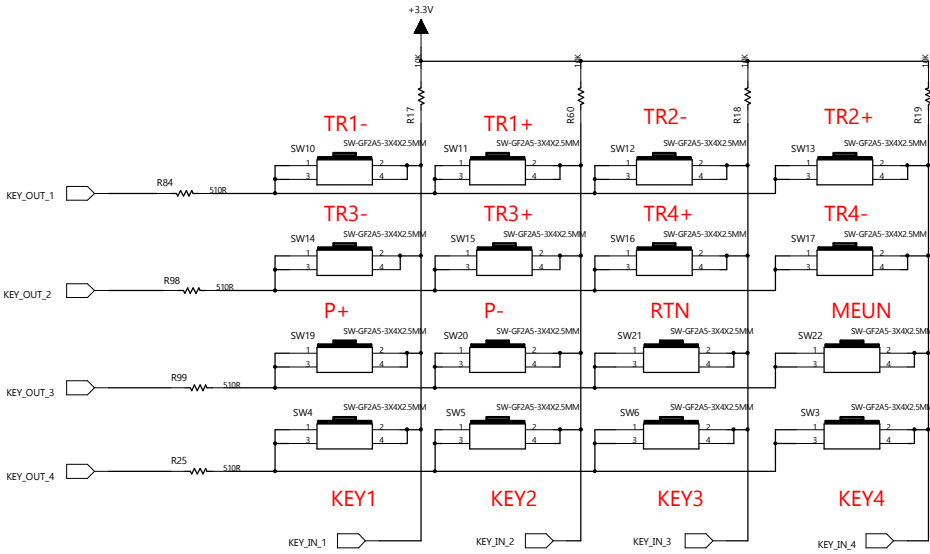

Charging Voltage: +8.4V
